

Abdellah Allali

Senior Software Engineer / Node.js & TypeScript

abdellah.allali.job@gmail.com | +212-64939-8849 | Morocco

[Website]: <https://www.allali.me> — [Linkedin]: <https://www.linkedin.com/in/aallali> — [GitHub]: <https://github.com/aallali>

Summary

Senior Software Engineer with extensive experience in Node.js, TypeScript, and modern backend architectures, specializing in API development, distributed systems, and scalable digital products. Proven track record in technical leadership, system design, and mentoring teams across healthcare, e-commerce, and data-intensive domains. Expertise in NestJS, cloud platforms (AWS, Azure), and both SQL/NoSQL databases. Passionate about building robust, maintainable systems and leading technical delivery in agile environments.

Experience

Senior Software & Data Engineer

[Remal](#)

Jan 2024 - Present

- Lead the design and implementation of a large-scale distributed data scraping and processing system using TypeScript and Node.js.
- Architect and optimize data collection workflows, ensuring high performance and reliability for complex data pipelines.

Senior Backend Engineer

[Niji](#)

Jun 2024 - Dec 2024

- Led the technical development of DoctoDispo, a healthcare management MVP for the French market, using Node.js, GraphQL, and PostgreSQL.
- Applied Domain-Driven Design principles with TypeScript to deliver a scalable and maintainable backend architecture.
- Collaborated closely with product and design teams to translate business requirements into technical solutions.

Senior Software Engineer

[VO2 GROUP](#)

Nov 2022 - Apr 2024

- Tech Lead for KastaFior (Healthcare Survey Generator): Designed GDPR-compliant database architecture and technical solutions using Node.js, TypeScript, and PostgreSQL.
- Led the migration of a multi-platform health tracking microservice infrastructure from AWS to Azure for AXA Health Keeper.
- Coordinated a team of 9 engineers to ensure seamless cloud migration while maintaining system performance and reliability.
- Technical Stack: Node.js, TypeScript, React.js, PostgreSQL, MongoDB, Redis, Serverless, Azure, RESTful APIs.

Software Engineer

[Crawlo.com](#)

Apr 2020 - Aug 2022

- Developed and maintained a SaaS platform for e-commerce pricing and assortment analysis using Node.js, TypeScript, and Vue.js.
- Built internal tools and onboarding guides to streamline data collection and accelerate developer ramp-up.
- Designed a custom bug tracking system with Node.js and Express.js, reducing error detection time and improving team productivity.
- Technical Stack: Node.js, TypeScript, Python, Vue.js, React.js, MongoDB, Elasticsearch, Redis, RabbitMQ, GraphQL.

Education

Master of Technology - MTech in Computer Science

UM6P - University Mohammed VI Polytechnic (2023)

Computer Architect in Software Engineering

1337 Coding School (2018)

Certifications

- Foundations of Distributed Database Systems - Johns Hopkins University
- Distributed Query Optimization and Security - The Johns Hopkins University
- Rest API (Intermediate) Certificate - Hackerrank
- JavaScript (Intermediate) Certificate - Hackerrank
- Computer Architect - University Mohammed VI Polytechnic

Languages

Arabic (Native) • French (Professional Working) • English (Bilingual) • German (Elementary)

Skills

Node.js • TypeScript • NestJs • AWS • PostgreSQL • MongoDB • Software Development • Data Engineering • Mathematics

Projects

Remal-API-1

Production-ready NestJS API boilerplate with Prisma ORM, authentication, testing, and CI/CD pipelines. Demonstrates modern Node.js/TypeScript architecture, scalable design patterns, and DevOps best practices for enterprise-grade applications.

<https://github.com/remaldev/remal-api-1>

Vultures

Lightweight, scalable scraper API built with Node.js and TypeScript for fetching Twitter data. Features REST service architecture, account rotation, and proxy support, showcasing robust backend design for data-intensive applications.

<https://github.com/remaldev/vultures>

AntsQ

Distributed web crawler engineered for large-scale data extraction. Implements queue-based distribution, horizontal scaling, and multiple scraping presets using Node.js, highlighting expertise in scalable system architecture.

<https://github.com/aallali/AntsQ>

Hanout

Full backend for a stock management system built with serverless Node.js and TypeScript on AWS. Features microservices architecture, MongoDB integration, and cloud-native design, ready for production deployment.

<https://github.com/aallali/Lhanout-api>
