

Abdellah Allali

Full Stack Engineer

abdellah.allali.job@gmail.com | +212-64939-8849 | Morocco

[Website]: <https://www.allali.me> — [Linkedin]: <https://www.linkedin.com/in/aallali> — [GitHub]: <https://github.com/aallali>

Summary

A software engineer with a strong focus on full stack development, specializing in backend systems and React/Vue.js with TypeScript for frontend. Extensive experience building applications with Node.js (NestJS, Express.js), Python, and both SQL and NoSQL databases. Proven track record in designing distributed systems, optimizing data pipelines, and delivering robust software. Currently building open-source tools while exploring better ways to manage data at scale.

Experience

Software Engineer

[Evead \(acquired by IPSOS\)](#)

April 2025 - Present

- Build and maintain full stack data platforms supporting ad market analysis across the MENA region.
- Design and implement large-scale distributed scraping systems and data pipelines using Python, Rust and Node.js.
- Develop web scrapers and backend services handling complex, high-volume data sources at scale.

Software Architect - Freelance

[Modularis Capital](#)

January 2025 - June 2025

- Led (a team of 3 developers) the technical setup and backend core development for the MVP of <https://marchesprives.ma/>, a B2B platform for managing private markets in Morocco.

Software Engineer

[Niji](#)

Jun 2024 - Dec 2024

- Developed MVP for DoctoDispo, a health management system for the French healthcare sector using Node.js (TypeScript), GraphQL, and PostgreSQL.
- Applied Domain-Driven Design and Hexagonal Architecture principles to build maintainable backend systems.

Software Engineer

[VO2 GROUP](#)

Nov 2022 - Apr 2024

- Developed KASTAFIORE, a healthcare survey application using React.js, React Native, and Node.js with TypeScript.
- Designed and implemented PostgreSQL database architecture compliant with GDPR regulations.
- Migrated microservice infrastructure from AWS to Azure for the AXA Health Keeper project, adapting platform-specific services.
- Collaborated with a team of 9 engineers to ensure smooth migration and system reliability.
- Technical Stack: Node.js, TypeScript, React.js, PostgreSQL, MongoDB, Redis, Microsoft Azure, RESTful webservice.

Software Engineer

[Crawlo.com](#)

Apr 2020 - Aug 2022

- Built and maintained Crawlo Ecommerce Pricing & Assortment Analysis SaaS platform
- Developed internal tools to streamline data collection and processing workflows.
- Created a custom bug tracking system to streamline error detection across servers.
- Implemented data processing pipelines using RabbitMQ for message queuing and Redis for caching.
- Tech Stack: Node.js, TypeScript, React.js, Vue.js, Python, MongoDB, Elasticsearch, Express.js, GraphQL.

Education

Computere Architect in Software Engineering

1337 Coding School (2018)

Certifications

- **Foundations of Distributed Database Systems - Johns Hopkins University**
- **Distributed Query Optimization and Security - The Johns Hopkins University**
- **Computer Architect - University Mohammed VI Polytechnic**

Languages

Arabic (Native) • English (Bilingual) • French (Professional Working) • German (Elementary)

Skills

TypeScript • Python • Node.js • React.js • PostgreSQL • MongoDB • AWS • Microsoft Azure • NestJs • Data Engineering • Java/Kotlin

Projects

Shaheen-Proxy

Shaheen-Proxy is a smart reverse proxy that manages and routes internet traffic through different proxy servers. Its purpose is to provide a single secure entry point that controls sessions, regions, and rotations automatically, making proxy usage faster, organized, reliable, and trackable, built in RUST.

<https://github.com/remaldev/shaheen-proxy>

Remal-API-1

Production-level NestJS-based API boilerplate with Prisma ORM, authentication, testing setup, and CI/CD pipelines. Demonstrates modern backend architecture with TypeScript and best practices.

<https://github.com/remaldev/remal-api-1>

Bus-Route-Planner

Serverless React application for student transportation management. Generates optimized bus routes and manages subscriptions using scheduling algorithms and external JSON data storage.

<https://github.com/aallali/Bus-Route-Planner>

Matcha

Tinder-like web application with user authentication, geolocation, real-time chat, and matchmaking. Built with Node.js, MySQL, and Socket.io, showcasing full-stack integration.

<https://github.com/aallali/Matcha>

Hanout

Full backend for a stock management system built on serverless architecture with TypeScript, MongoDB, and AWS. Ready to integrate with any frontend application.

<https://github.com/aallali/Lhanout-api>
